Day 3 - Agenda

- ✓ Github Copilot Agent → Coding Agent, Cloud Agent
- ✓ Governance, Safety & Enterprise Considerations
- ✓ Strategic Adoption & ROI
- ✓ Mini Project - Individual lab
- ✓ Capstone Project - Group Activity

Github Copilot Agents, Cloud Agent & Coding Agent

- ↳ Assistant
- → Agent = not just answering the Q.
  - ✓ Agent can understand a goal, intent, inspect a codebase, make plan, modify multiple files, run checks, run commands in CLI, create commits, prepare work for review.

Copilot chat - Ask mode - Answer the Q.
- Agent mode = Help you with overall S/W Dev lifecycle

Github Copilot Agent Family

	Where it runs?	Main Purpose	Human involvement
① Copilot chat (Ask)	IDE, Github.com, Github Mobile, CLI depending on setup	Ask Q, explain code, generate snippets	High
② Copilot Agent Mode	IDE such as VSC	Interactive multi-step coding inside the developer workspace	High to med.
③ Copilot Cloud Agent	Github hosted Cloud workflow	Autonomous research, planning, coding, planning, PR work	Med to low, but review is required
④ Custom agents	Repo, org, enterprise config	Specialized agent behavior for certain tasks	Configured by team
⑤ 3rd party agents	Github-integrated agent eco-system	External coding agents that can work alongside Copilot cloud agent	Review-based

Governance, Safety & 'Enterprise' Considerations

✓ ① Code provenance & licensing awareness
② Responsible AI usage
③ Copilot can / cannot do
④ Enterprise topics that engineering should be aware of

① Code Provenance

- ✓ Check whether your org allows suggestions that match public code
- ✓ Coding ref enabled / disabled
- ✓ Review Suggestions - looks overly specific, unusually polished, suddenly complete
- ✓ Suggestion resembles a known lib implementation

② Responsible AI usage

without weakening quality, privacy, safety or accountability

- ✓ Give it clear, bounded tasks.
- ✓ Review output
- ✓ Test generated code
- ✓ Apply security review

③ Copilot can / cannot do

CAN = Code, explain code, PR, code review, plan, refactor, search Repo, connect with external system (MCP servers) for better context, tests, common engineering

CANNOT = Guarantee correctness / correctness
Business alignment
security / compliance
understand your full system

④ Topics managed outside the engineering team.

- ⓐ Legal & Licensing policy
- ⓑ Privacy & Data handling policy
- ⓒ Audit & compliance
